29 May 2015

Those who have purchased National hives should mark and identify each hive component along the upper (hidden) face – avoiding any surface directly accessible to the bees as shown **RED** below – using a permanent marker or (better) a soft pencil. Do not mark the individual comb frames or any other surfaces accessible to the bees.

For the hive identification number (eg 154) I'll provide a stencil kit to mark the outside of the roof which can be erased when the hive is moved off the Apiary site at the end of the 2015 beekeeping season.
